MetaNet filters are washable metal air filters for use in heavy duty industrial applications and in commercial and industrial heating, ventilation and air conditioning systems. Owing to their excellent dust holding capacity and ability to perform in high moisture conditions they are particularly suitable for use as grease filters in kitchen hoods.

Their ability to reduce grease deposits on fixtures and duct work has many cost saving benefits:

- reduces frequency of duct cleaning maintenance
- reduces the risk of fire prolongs the life span of fans and motors
- promotes health and safety in kitchens

In addition, MetaNet air filters can be used as prefilters to more expensive higher efficiency filters. The filters are available in the classification range G2, but when coated with AAF's antimicrobial treatment, the filters qualify for G3 classification according to the EN779:2012 standard.

Multiple Layered Media Holds More Dust
MetaNet filter media consists of multiple layers of pleated galvanized wire formed into a compact maze of dirt catching surfaces. This multiple layer design creates an effective dust holding barrier for dust laden particles while allowing clean air particles to move through the media unhindered. The media is also available in a stainless steel and aluminium sheet execution.

Sturdy, Rigid Construction
To ensure complete filter integrity in difficult operating conditions, the filter frame is made of sturdy galvanized steel. The multi-layered media is held in place by metal grids on both the air inlet and air outlet sides. This construction increases filter rigidity and ensures filter performance in heavy dust loading applications. The frame is also available in a stainless steel and aluminium execution.

Easy to clean and install
MetaNet filters are easy to install. The filters can be washed in a solution of detergent and warm water or cleaned with compressed air.
MetaNet Filter

### Galvanized steel

- **Code**: 1111
- **U-profile**: galvanized steel, 1 mm thick
- **Support grid air entering side**: galvanized steel, mesh
- **Media**: multiple layers of knitted galvanized steel
- **Support grid air leaving side**: galvanized steel, mesh
- **Temperature limit**: 420 ºC

### Stainless steel

- **Code**: 2626
- **U-profile**: stainless steel, 1 mm thick
- **Support grid air entering side**: stainless steel, expanded
- **Media**: multiple layers of knitted stainless steel
- **Support grid air leaving side**: stainless steel, expanded
- **Temperature limit**: 500 ºC

### Aluminium

- **Code**: 3737
- **U-profile**: aluminium, 1 mm thick
- **Support grid air entering side**: aluminium, expanded
- **Media**: multiple layers of knitted aluminium steel
- **Support grid air leaving side**: aluminium, expanded
- **Temperature limit**: 300 ºC
- **Tolerance on**:
  - Width and height: +0 mm; -1 mm.
  - Thickness: ± 0.5 mm.
