**VariCel®**

**HIGH EFFICIENCY SUPPORTED PLEAT FILTERS**

- MERV 14, MERV 13, and MERV 11 efficiencies
- Excellent performance in difficult operating conditions
- MERV 14 and MERV 11 available with antimicrobial
- MERV 14 and MERV 13 meet LEED® Project Certification efficiency requirements
- UL Classified

The VariCel filter is a high capacity, extended surface, supported pleat filter engineered for a variety of applications. With a supported pleat media pack, the VariCel filter’s rigid construction maintains a compact, unitized structure even under difficult operating conditions, such as variable air volume, turbulent airflow, repeated fan shutdown, high temperature operation, high humidity, or intermittent exposure to water, such as seacoast installations. Variable air velocity and repeated fan shutdown do not compromise performance.

**Designed to Improve Indoor Air Quality**

VariCel filters with antimicrobial are designed specifically to improve Indoor Air Quality (IAQ). These air filters are designed to trap and concentrate particulate air contaminants, including viable fungal and bacterial spores. The presence of antimicrobial preservative in the filter media is intended to preserve the integrity of the media throughout the useful life of the filter. Antimicrobial preservatives are not meant to increase the efficiency of the filter, nor to kill microorganisms "on the fly" as they pass through a filter. Antimicrobial is EPA registered and environmentally safe.

**Dual-Density Media Reduces Operating Costs**

VariCel media is manufactured with two layers of glass fibers, coarser fibers on the air entering side and finer fibers on the air leaving side.

Our dual-density design allows dirt particles to be collected throughout the entire depth of the filter, utilizing the full cleaning potential of the media. Maximum dust holding capacity extends the life of the filter, minimizing operating costs.

The water-resistant media can withstand intermittent exposure to water, making VariCel filters ideal for installations in humid areas, or where the filters are exposed to moisture.
VariCel® Filters

Engineered for a Variety of Applications

**Type SH** Single Header VariCel filters are designed for systems originally supplied by AAF Flanders. A unique \( \frac{13}{16} \)" flanged header on the air entering side allows the filter to be easily inserted and latched into front and side access systems.

**Type DH** Double Header VariCel filters are designed to upgrade air cleaning performance and reliability. Two \( \frac{13}{16} \)" thick flanged headers make the filters compatible with the holding frames and latching devices of various manufacturers, including rear access systems.

**XL Series** VariCel filters, single header (XL-S) and double header (XL-D), contain up to 67% more media and offer more than twice the service life of standard single and double header models. XL Series VariCel filters are offered in a 12” depth, MERV 14 and MERV 11.

**Type HT (High Temperature) Series** VariCel filters are designed for systems operating from 350°-900°F. Constructed of aluminized steel, HT VariCel filters offer rated efficiency with proven reliability over the life of the filter. See page 4 for models and temperature limits. HT VariCel filters are offered in a 12” depth, MERV 14 and MERV 11.

**Type NH Series** VariCel filters are designed for special sizes and applications, including incineration and compaction disposal systems. Manufactured of fire-retardant, \( \frac{3}{4} \)" thick, heavy wall particle board, Type NH VariCel filters are UL Classified and are operable at temperatures up to 200°F. The filters are constructed without headers, and cell sides are flush with front face dimensions.
Crimped Rear Flanges (SH) are rolled over and riveted to add strength, eliminate sharp edges, and prevent bypass leakage.

Corrugated Aluminum Separators with Rolled Edges maintain uniform pleat spacing for optimum airflow. The separators are rolled to eliminate sharp edges, preventing media damage during shipping and personal injury during installation.

**Built Rugged for Dependable Performance**

The VariCel filter’s rigid construction with supported pleat media pack maintains a compact, unitized structure even under tough operating conditions. Variable air velocity and repeated fan shutdown do not compromise performance.

**Unitized Construction**

Interlocked header and cell sides, along the entire length of each side, provide maximum sealing. Competitive filters are designed with loose fitting headers that allow greater potential for bypass leakage.

**Pleats and Separators Bonded for Strength**

During the pleating process, spots of glue are applied to bond each separator to the adjacent pleat. This solidifies the media pack to minimize movement and prevent media damage. Burst strength is increased to prevent the filter from blowing out under variable air volume conditions or unusually high resistance.

Galvanized steel headers and cell sides resist damage during shipping and handling, and prevent corrosion over long service life (HT VariCel filters are constructed of aluminized steel).

**Easy Installation**

Rigid construction and minimum depth make VariCel filters easy to install in all types of systems.
VariCel® Filters

Performance Data

**Composite Minimum Efficiency Curve**

![Efficiency vs. Particle Size](chart)

- MERV 14
- MERV 13
- MERV 11

*Tested in accordance with ASHRAE Standard 52.2.

**Initial Resistance vs. Filter Face Velocity**

![Initial Resistance Chart](chart)

- 12" Deep Filters
- 500 FPM Rated Face Velocity

12" deep filters are rated at 500 FPM filter face velocity.

6" deep filters are rated at 250 FPM filter face velocity.

Recommended final resistance for VariCel filters is 1.5 w.g. Recommended final resistance for HT VariCel filters is 1.2 w.g.

Underwriters Laboratories Classification: All VariCel filters are UL Classified. Testing was performed according to UL Standard 900 and ULC-S111.

**Prefilters Can Double VariCel® Filter Life**

Using prefilters, such as AAF Flanders’ MEGAp\textsuperscript{a}leat M8 and Perfect\textsuperscript{g}leat pleated filters or "5700" panel filters, will greatly extend the life of VariCel filters.

**Options**

- VariCel filters can be ordered with faceguards made of flattened, expanded, galvanized, or aluminized steel on one or both sides of the filter.
- Factory installed gaskets are available on the front or back of the header.
- Vinyl coated separators are available for corrosive conditions.
- 1½” Single Header VariCel filters, designed for other manufacturers’ equipment, are also available.
