Bringing clean air to life.®

Air Filtration Expertise

At AAF, we have extensive experience in the nuclear field and our mission is to develop filtration equipment of the highest quality, while also achieving the most demanding specifications and safety standards. The products we supply serve critical roles in protecting the employees of nuclear power plants, the surrounding environment, and local communities.

- | Full range of HEPA filters
- | Completed filters are qualified
- | Performance is maintained
- | Resulting in a long filter life

Our years of experience ensure we meet ever more complex requirements, while guaranteeing a maximum level of quality and safety.

Nuclear Solutions

AAF International is a leading supplier of clean air solutions for the nuclear sector, providing innovative filtration products from the turbine hall to the nuclear islands. AAF has worked in this industry since its inception and has designed and manufactured products across nuclear power plants around the world.

The vast majority of our equipment and filters are all designed, engineered and manufactured within our French facilities. Our approved product range conforms to the latest standards and is validated by the largest international laboratories in the nuclear field. We also have dedicated R&D centres located around the world, to continue to develop innovative products.

- | Renowned reputation
- | Air treatment expertise
- | Full system capabilities
- | Compliance with all standards
- | Critical protection

Safety focused

Years of experience

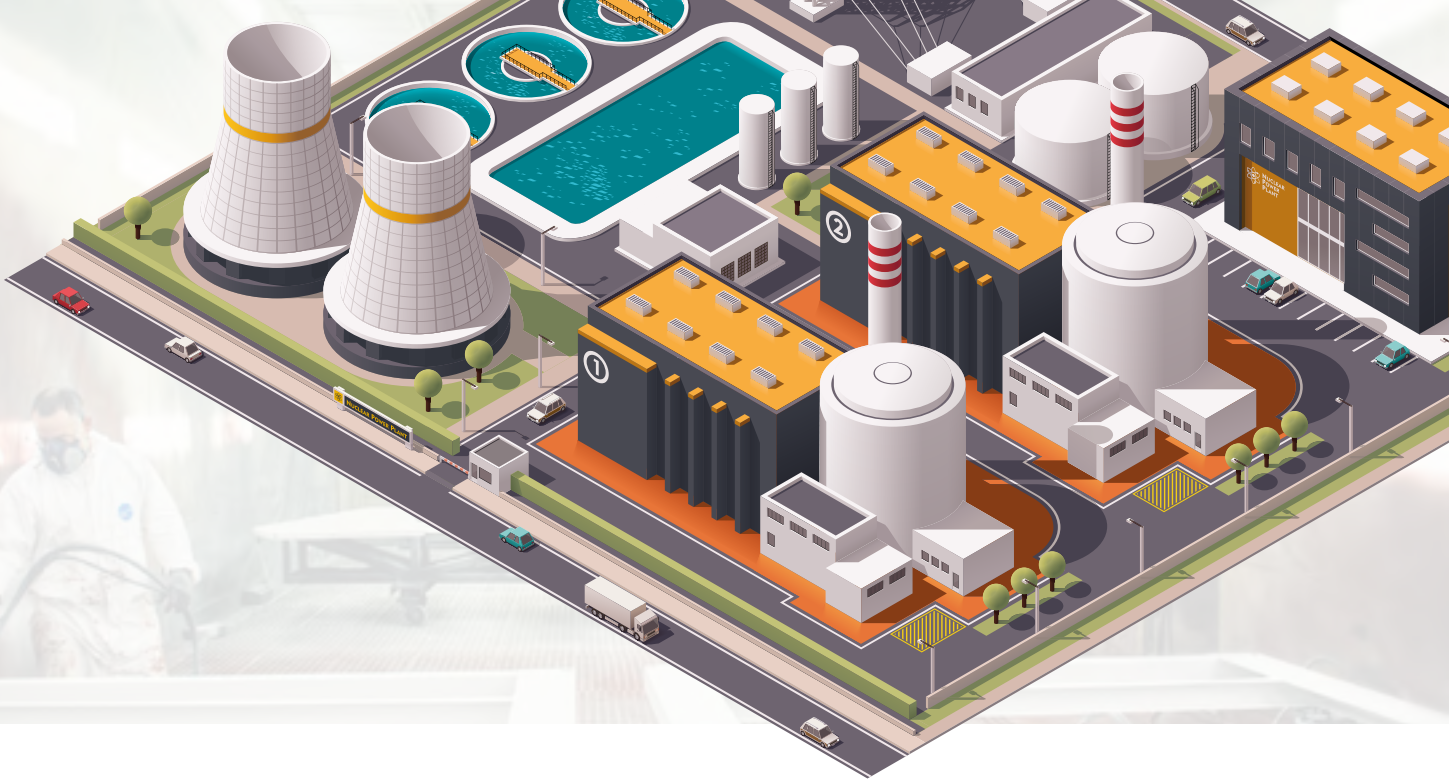

Comprehensive knowledge

Innovative products

System Design and Support

AAF engineers can support you in the design of new systems, as well as refit projects or modernising existing equipment. All AAF systems are designed to meet the most severe environmental conditions including extreme temperatures, pressures, and radiation.

- | Iodine adsorption systems
- | Filtration systems
- | Air handlers
- | Cooling coils
- | Fans
- | Dampers

Emergency diesel generators

AAF has been supplying filtration equipment for emergency diesel generators for nuclear power plants for more than 50 years. They ensure the power supply to important components such as the reactor cooling system is maintained – this allows a controlled shutdown of the reactor.
